

SEEK - O - SPHERE

User Manual

A friendly guide for learners

Everything you need to explore, practise and track your learning on Seek-O-Sphere — no experience required.

For: students and curious learners, ages 8 to 80

Updated 16 August 2026

Getting Started

You do not need an account to read anything. Open the site and start exploring. An account is only needed if you want your practice saved.

- **Just looking?** Everything in the learning chapters is open. Use the menu at the top.
- **Want your progress kept?** Choose **Sign In**, then sign up with an email address or with Google. You can also continue as a guest.
- **Joined through a school?** Enter the join code your teacher gave you when you sign up, and your work will show up in your teacher's list.

Finding Your Way Around

Where	What you will find
Home	The welcome, and Euclid.
What is AI?	The plain-language explanation. Start here.
History	Drag the year slider from 1950 to today and watch what changed. There is a "Guess the Year" game at the end.
Types	The different kinds of AI, with everyday examples.
Study Tools	How to use AI to study without letting it do the thinking for you.
Using AI Responsibly	What to be careful about.
Learning Lab	Practice questions. See below.
Find My AI Tool	Describe what you need; it suggests tools, and can show only the free ones.
Help & Resources	A searchable FAQ and a list of good free places to learn more.

The Learning Lab

The Lab has two modes.

- **Curriculum Lab** — choose your board (CBSE, ICSE, UK, US or IB), your age group and a subject, and practise. Maths, Science, English, History and Geography.
- **Exam Prep** — questions for CUET, Railways, Bank PO, SSC and UPSC, with difficulty levels and an optional timer if you want to practise under pressure.

In both, Euclid gives you a hint if you are stuck and an explanation after you answer. Getting questions right in a row builds a **streak**. If you are signed in, everything you answer is saved automatically — you can close the tab and come back.

Eulid and His Five Tools

Eulid is the small green alien. He is on every page, and he is not just decoration.

- **Move him** by holding and dragging. He stays where you put him as you move around the site, and goes back to his usual spot if you leave for a while.
- **Leg one — magnifier.** Press it and your pointer becomes a lens for reading small print.
- **Leg two — highlighter.** Press it, then select text to highlight it. There are several colours, an eraser, and a clear-all if you want to start again.
- **Leg three — read aloud.** Press it, then select any text and Eulid will read it to you.
- **Leg four — your dashboard.** A shortcut straight to your progress.
- **Leg five — yours.** Set it to whatever you use most.

Press **Esc** — or press the same leg again — to switch any tool off.

The Study Planner

The planner panel lets you set out what you intend to study, by day, week or month. If you joined through a school, your teacher can add items to it as well; anything you write for yourself stays yours.

Your Dashboard

Sign in and choose **My Dashboard**. It shows:

- **Overall accuracy**, your **best streak**, and how many **days** you have been active.
- A **progress chart** — questions answered per day, over the last week, the last month, or all time.
- A **per-subject breakdown**, so you can see what is going well and what needs work.
- An **activity heatmap** and a list of your recent sessions.
- Your **profile picture**, which you can upload or remove.

For Teachers and School Admins

If you run a school group, your panel lists your own students with their questions answered, accuracy, best streak and last-active date, and lets you open any one of them to see their progress in detail. You will only ever see students from your own school — no other school's learners, no learners who signed up on their own, and no other administrators. That boundary is enforced by the database itself, not only by the screen.

Common Questions

Question	Answer
Does it cost anything?	No. It is free and always will be.
Do I have to sign up?	No — everything is readable as a guest. Sign up only if you want your practice saved.
Will it work on my phone?	Yes.
My dashboard shows zeros.	Progress is recorded from your next signed-in Lab session onwards. Answer a few questions and refresh.
Can I use it offline?	Mostly, once you have loaded it. Answers are stored locally and sync when you reconnect.
How do I stop a tool?	Press Esc, or press the same leg again.

AI is a tool. You are the thinker. Eulid agrees.
